PACE
PLANT HEALTH
ADVOCATES

Pace 49 and Pace Solutions are located in Vancouver, BC and have been operating throughout North America for the past 35 years in food safety, greenhouse sanitation and disease control, and providing water treatment solutions for boilers.

Pace 49 is the US division that is a full service company to the US, Mexico and Central America, specializing in detergent cleaners, adjuvants and an EPA registered disinfectant, fungicide, algacide, and bactericide for the Horticulture, Agriculture and Floriculture industries.

With continual testing against and combining with industry standard fungicides, we are finding more and more ways to reduce fungicide costs while increasing disease control. PACE 49 specializes in developing cleaning and sanitation programs, HACCP, GAP, and SQF, by designing and implementing the PACE ACBD System® (Always Clean Before Disinfecting) for each of our customers.

Pace prides itself on helping growers reduce costs in production and facilities and we now have the opportunity to help growers reduce energy expenses as well. Pace's newest product, EndoGreen, is fully biodegradable that helps growers reduce natural gas and carbon emissions by 10-15%. This can be achieved with a onetime addition of the product to any heating system without having any downtime, expensive new equipment installs, and/or concerns about safety for your boilers or pumps. Our goal with this product is to be an energy partner with each of our customers to help you create a more sustainable operation for years to come.

Wes Martin is the President/ CEO of Pace Solutions and Pace 49 and brings business and technical experience to both companies. Judy McWhorter, Vice President and Sales Manager for Pace 49, provides leadership to 4 territory managers that are strategically placed throughout the US.

Pace 49 is committed to providing technical expertise and quality product by consulting with growers on disease control from seed to shipping, water enhancement for standard or organic growers, and energy reduction initiatives.
